

Turning complex, regulated systems into
clear, predictable experiences.

Emma Moore

Human-Centered Research & Strategy Portfolio Snapshot

Mixed-methods research | Multi-team alignment | System modernization

Designing for Large, Regulated Ecosystems

Across NSF, NIH, and FDA, I worked in environments where complexity, policy constraints, and legacy systems made clarity difficult for both users and internal teams. My work focuses on uncovering what truly matters, removing friction, and guiding stakeholders toward aligned, user-centered decisions.

FFDR UX Debt Inventory Backlog

All debt items on this list must pertain to the Foreign Financial Disclosure Report (FFDR) application.

Priority Key:

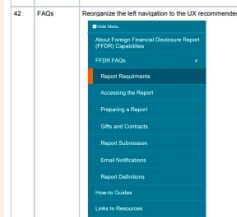

- HIGH** Affects multiple stakeholders and/or users OR could cause task failure; user feedback from testing OR Prod Support; accessibility compliance concern; against UX recommendation and/or guidelines; major Policy requirement
- MEDIUM** Causes confusion but users could still complete the task; issue which may also impact non-FFDR R.gov applications (e.g., styles); Policy requirement that didn't align with MVP timeline
- LOW** Nice to have, reduce annoyance; error in grammar, word usage, formatting, style, behavior consistency, etc.

Source of Origin:

- USER FEEDBACK** Usability Testing, Survey, Prod Support Ticket (POC Stephanie Yee)
- UX REVIEW**
- BA Review (i.e., Grace/Sweetly)
- EUX Team Review
- DIS Lead/Client (e.g., Robin/Jean)
- Development Team (e.g., Tony)
- Test Team (e.g., Greg)
- 508 Testing
- BACKLOG**

Items:

- 35 Various pages Revised left navigation for large number of foreign orgs
- 40 Various pages The date display across the application should be more YYYY. The MM/DD/YYYY is the format we ask users to
- 41 FAQs Grammar and formatting issues throughout FAQs page
- 42 FAQs Reorganize the left navigation to the UX recommendations

FFDR PAPPG-26 Impact Analysis

Purpose

The purpose of this page is to document impacts to FFDR based on the PAPPG 26-1 DRAFT.

Target release	August 2025
Epic	PSM-38284 - Foreign Financial Disclosure Report (FFDR) IN PROGRESS
Component	PAPPG_2026
Wireframes	TBD
Document status	IN PROGRESS
Document owner	Kelly, Grace (Contractor)
Designer	Moore, Emily I. (Contractor)
Developers	All
Testers	All

How I Bring Clarity to Complexity

- Uncover needs through mixed-methods research
- Align stakeholders through actionable insights
- Translate policy + workflow constraints into clear requirements
- Build repeatable systems (ops, onboarding, templates)
- Support leadership with concise, decision-ready recommendations

Usability Test Plan: RGOV PAPPG - Foreign Financial Disclosure

I. Usability Test Overview

Purpose

The usability sessions will focus on scenarios involving the Foreign Gifts and Contracts Disclosure process.

- Evaluation sessions will solicit feedback on the new PAPPG requirement that all NSF registered institutions of higher education (IHEs) must disclose support from foreign organizations through the Foreign Gifts and Contracts Disclosure form. Because this will be a new feature used by many Research.gov users we will test to determine if users can easily navigate to the form from the research.gov home page and can complete and submit the necessary disclosures.

Approver(s)

The usability test plan needs to be approved by David Saunders or Kevin Hewitt prior to participants being scheduled.

Target Users

The sessions will include ~6-8 vol

- All participants will have

Approach

A target number of 6-8 participant conducted remotely utilizing screen Gifts and Contracts Disclosures p analyzed and compiled into a re

CDRH Digital Transformation - Evolving the Way We Work (User Experience)

CDRH is reimagining how it does work with a focus on the end users (CDRH Staff, Industry, & Patients)

USE DESIGN THINKING to reimagine better solutions

THINK BROADER than incremental improvements

- Think enterprise data rather than separate database
- Think digital interactions (vs. electronic paper)
- Use our historical knowledge, but don't let it limit us

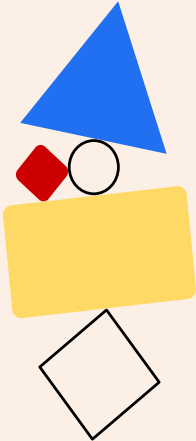

OUR USER EXPERIENCE (UX) APPROACH

- Start early
- Use data
- Test ideas
- Research, analyze, test, repeat

Transforming User Insights Into Direction

I led research that surfaced critical workflow gaps, compliance risks, and unmet needs. The synthesis clarified which changes would deliver the greatest impact with the least disruption. **Impact:**

- Reduced rework
- Informed product priorities
- Supported compliance-aligned decisions

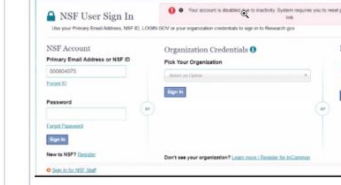

UX Recommendations

Background/Context: Messaging is needed around the scenario of sign in when a user happens, users will be prevented from accessing their profile/account until they reset the form of an error message at the top of the Sign In page, which tells users to reset password input field. The message disappears after about 3 seconds so will be easily missed in sign in. For reference items, support activities, and steps to end goal re: this request for User Inactivity.

[UX Recommended] Option 1: Trigger for password reset f

Current Scenario/Screenshot

1. User selects "Sign In" and error message displays instructions for 2-3 seconds before disappearing. The error message is: "Your account is disabled due to inactivity. Sign in Password link"

FFDR Front End Error Handling

The general consensus is that the user should "pick up" as close to where they "left off" as possible; the purpose of this is to prevent unnecessary confusion and/or disorientation.

Common HTTP Error Status Code	
403 Forbidden (Access Denied)	The server refuses to return the requested object or action. Ex. a user attempts to view a disclosure that the user is not associated with, the user attempts to delete a funding source belonging to a disclosure the user is not associated with
MVP 403 will follow 500	
404 Not Found	The data object with the ID specified in the query is not found in the DB. Ex. the object no longer exists after being deleted, object with that ID never existed, etc.
500 Internal Server Error	A generic error code, which the back end return when some unexpected error prevents the data returning or action completing

Page	Action	Error	Descriptive Scenario	MVP Handling	Post-MVP Handling (unchanged from MVP except where noted)
Landing Page	Load	missing required role		Show warning message	Possible redesign
		no possibilities to create disclosures		Show warning message	Possible redesign
	Create Disclosure	403		Redirect to Service Unavailable error page	
		500		Show generic error message	

508 Compliance Report - FFDR - May 2024 Release

of FFDR pages created in support of the May 2024 release. The objective was to complete a review of the report, and to present the outcome.

if January 2017, requires conformance to the Web Content Accessibility Guidelines (WCAG) 2.0 issues include indicating problems for older users, people with disabilities or accessibility needs.

ordering to three levels providing successively greater degrees of accessibility:

accessibility features, and most common barriers for disabled users. The report includes accessibility.

(3W)

-3), where

less impossible for one or more groups of users.

that make access difficult and somewhat difficult, respectively.

scanning, was used to generate the report, which was analyzed for errors. Warnings were reviewed.

Guiding Stakeholders with Decision-Ready Findings

I distilled research into clear, prioritized actions that balanced user needs, technical constraints, and policy requirements. These recommendations directly influenced quarterly planning and reduced ambiguity for engineering. **Impact:**

- Avoided wasted engineering cycles
- Accelerated delivery
- Boosted cross-team alignment

PSM Quarterly Planning UX Debt - January - March 2025

Key: USER FEEDBACK - UX debt item came directly from user feedback
 NEW - newly added since last quarter

Planned/In Progress Work for the Quarter

	Area	Description	UX Priority	JIRA	Comments	LOE	Client Comments
1	Proposal File Update	Allow SPO users to initiate PFUs - SPOs are often the ones preparing the updates - This will reduce burden on PIs - Display Updated Submitted Proposal and 'Revise Budget' buttons	HIGH USER FEEDBACK	TD-85 - Allow SPOs to initiate PFUs (NO ACCEPTED)	- Stephanie Rosen indicated we should revisit SPOs initiating PFUs this quarter - This is a gap with the PM/PMG we need to address - Planned for January release	F E L O W M d um B E m e u m h tgh	
2	Current & Pending Support Update	Add the ability for personnel to skip updating a Current and Pending Support Update file Per Stephanie: This is more about having the ability to skip an upload for certain individuals, and indicate they are no longer on the project. Consider checkbox, or uploading blank PDF behind the scenes.	HIGH USER FEEDBACK	TD-86 - Current and Pending Support update. Allow personnel to skip upload (PO ACCEPTED)	- Feedback came from help desk tickets, conveyed by Stephanie Yee - Prasanna	F E L OW E M e	

Issues

Findings and Recommendations

Issue Severity Key

- HIGH

 Prevents task completion, or causes extreme frustration for majority of users
- MEDIUM

 Causes frustration or a delay in task completion, but task can eventually be completed
- LOW

 Causes slight frustration or delay in task completion, or is more cosmetic in nature

Severity	ID	Challenge	Recommendation(s)	R
HIGH	1	Findability of next steps Users had trouble recognizing that they needed to add details for their gift/contract after getting a success message at the top of the screen, despite the instructions included in the message. They did not have an easier time during Scenario 3 after having gone through Scenario 2B. 14% (1/7) of users never clicked on "Provide Details" after adding a gift/contract during Scenario 2B 28% (2/7) of users struggled to find "Provide Details" after adding a gift/contract, but were able to complete Scenario 2B 14% (1/7) of users never clicked on "Provide Details" after adding a gift/contract during Scenario 3 28% (2/7) of users struggled to find "Provide Details" after adding a gift/contract, but were able to complete Scenario 3 28% (2/7) users stated that the application should take you directly to the details page after adding a gift/contract	Compress the steps to provide details - Create separate buttons for "Add Gift" and "Add Contract," eliminating the step of adding a gift/contract via modal - Once a user clicks a button to add a gift/contract, take them directly to the appropriate details page where they can see all required form fields <i>*Already implemented in wireframe designs</i>	

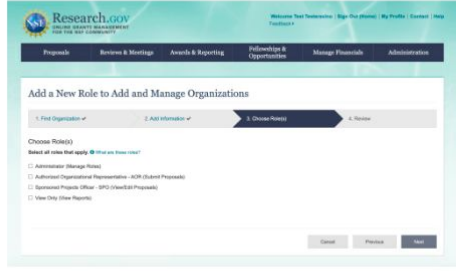

Clarifying End-to-End Workflows Across Multi-Team Systems

I mapped complex workflows to identify disconnects and unify cross-functional teams around the same operational picture. These artifacts became a source of truth for design, policy, and engineering teams.

Impact:

- Reduced confusion
- Improved consistency
- Enabled cross-team decision making

Role Request Screens

Scenario	Component	As Is	What Changed?
User requests new org role(s): • Admin • AOR • SPO • View Only	Role request wizard step 3		Added authentication info message
User requests new org role(s): • Admin • AOR • SPO • View Only	Role request wizard success page - <i>unregistered organization</i>		• Changed success page to View My Roles • Removed "Continue to My Profile" and "Add Additional Role" links ◦ Profile and Add a New Role links are available in the left nav on this page • Updated success message • Added authentication info message

External Style Guide

Building Research & UX Operational Infrastructure

I built templates, onboarding materials, and governance guidelines to support consistent, scalable UX practice. This infrastructure reduced onboarding time and improved quality across teams. **Impact:**

- Standardized processes/designs
- Faster onboarding
- Reduced knowledge loss

Instructions: Axure Sticky Buttons

- Make buttons, name them "scrolling buttons."

Turning Insights Into Clear, Usable Designs

I converted insights into low-fidelity prototypes that helped teams visualize solutions, uncover edge cases, and define requirements earlier in the process.

Impact Across Federal Clients

- Aligned multi-vendor teams around shared priorities
- Reduced rework by clarifying requirements early
- Delivered insights that shaped high-stakes, policy-driven decisions
- Improved consistency across systems through UX governance
- Supported leadership with concise, accessible executive briefings

What I Bring to Design Research and Strategy Roles

- Breadth across research, analysis, design, and storytelling
- Depth in systems thinking, policy translation, and multi-team alignment
- Strong communication with senior leadership
- Ability to turn messy complexity into clear, confident decision-making
- Love of mission-driven, public-serving work
